

Marvel Cinematic University (MCU) API 1.0.0

This is a Marvel Cinematic Universe (MCU) API server that provides information on character's in [Marvel](#)'s movies and tv shows. For this API, there is no auth key needed. I utilized a [CSV to JSON converter](#) to convert data from a [Kaggle dataset](#) which sourced from a dataset at [Kamis Data Program Indonesia](#). All characters are owned and copywrite by [Marvel](#). This API documentation was written via Swagger at <http://swagger.io>.
